

Improving the safe use of monitored medicines

What is SafeScript NSW?

SafeScript NSW is computer software that allows prescribers (general practitioners, other medical specialists and nurse practitioners) and pharmacists to access real-time information about a patient's prescription history for certain high-risk medicines, known as monitored medicines, such as opioids and benzodiazepines.

Access to this information helps prescribers and pharmacists to make safer clinical decisions about their patient's care.

Getting started is easy

1. [Register for SafeScript NSW](#) which takes less than 10 minutes to complete.

2. [Enable SafeScript NSW in prescribing or dispensing software](#) if using integrated clinical software.

3. [Complete the accredited eLearning modules](#) which explain how and when to use the system, information about monitored medicines and clinical practice, and how to support patients who may be at risk of harm.

4. [Log in to SafeScript NSW https://hp.safescript.health.nsw.gov.au](https://hp.safescript.health.nsw.gov.au) (bookmark this page for easy access)
